OUTDOOR PLEASURE

La collezione **Key West** si definisce in molteplici espressioni.

Design e materiali usati, il sunrope e l'alluminio nella tenue colorazione CIPRIA, offrono un'immagine di grande, raffinata eleganza che si esprime con naturalezza e glamour nelle diverse composizioni.

La versatilità e l'ampia scelta degli elementi permette di personalizzare gli arredi in infinite soluzioni che rimangono comunque 'vive' e variabili per rispondere a sempre diverse esigenze.

L'estrema facilità di accostare, inserire, separare, togliere e ricomporre gli stessi elementi lascia spazio a illimitate possibilità. Le travi in frassino termo cotto sono il trait d'union dei vari elementi, dei veri e propri collegamenti funzionali ed estetici.

Delineano gli spazi, offrono separazioni sempre modificabili, arricchiscono l'arredo con un legno caldo e resistente all'esterno. Idee che danno vita a nuove idee.

The **KeyWest** collection offers various definitions.

The design and materials used, the sunrope and aluminium in the light shade "CIPRIA", suggest an aesthetic stylishness and a touch of distinctive elegance, expression of pleasure of living in a comfortable and glamorous space.

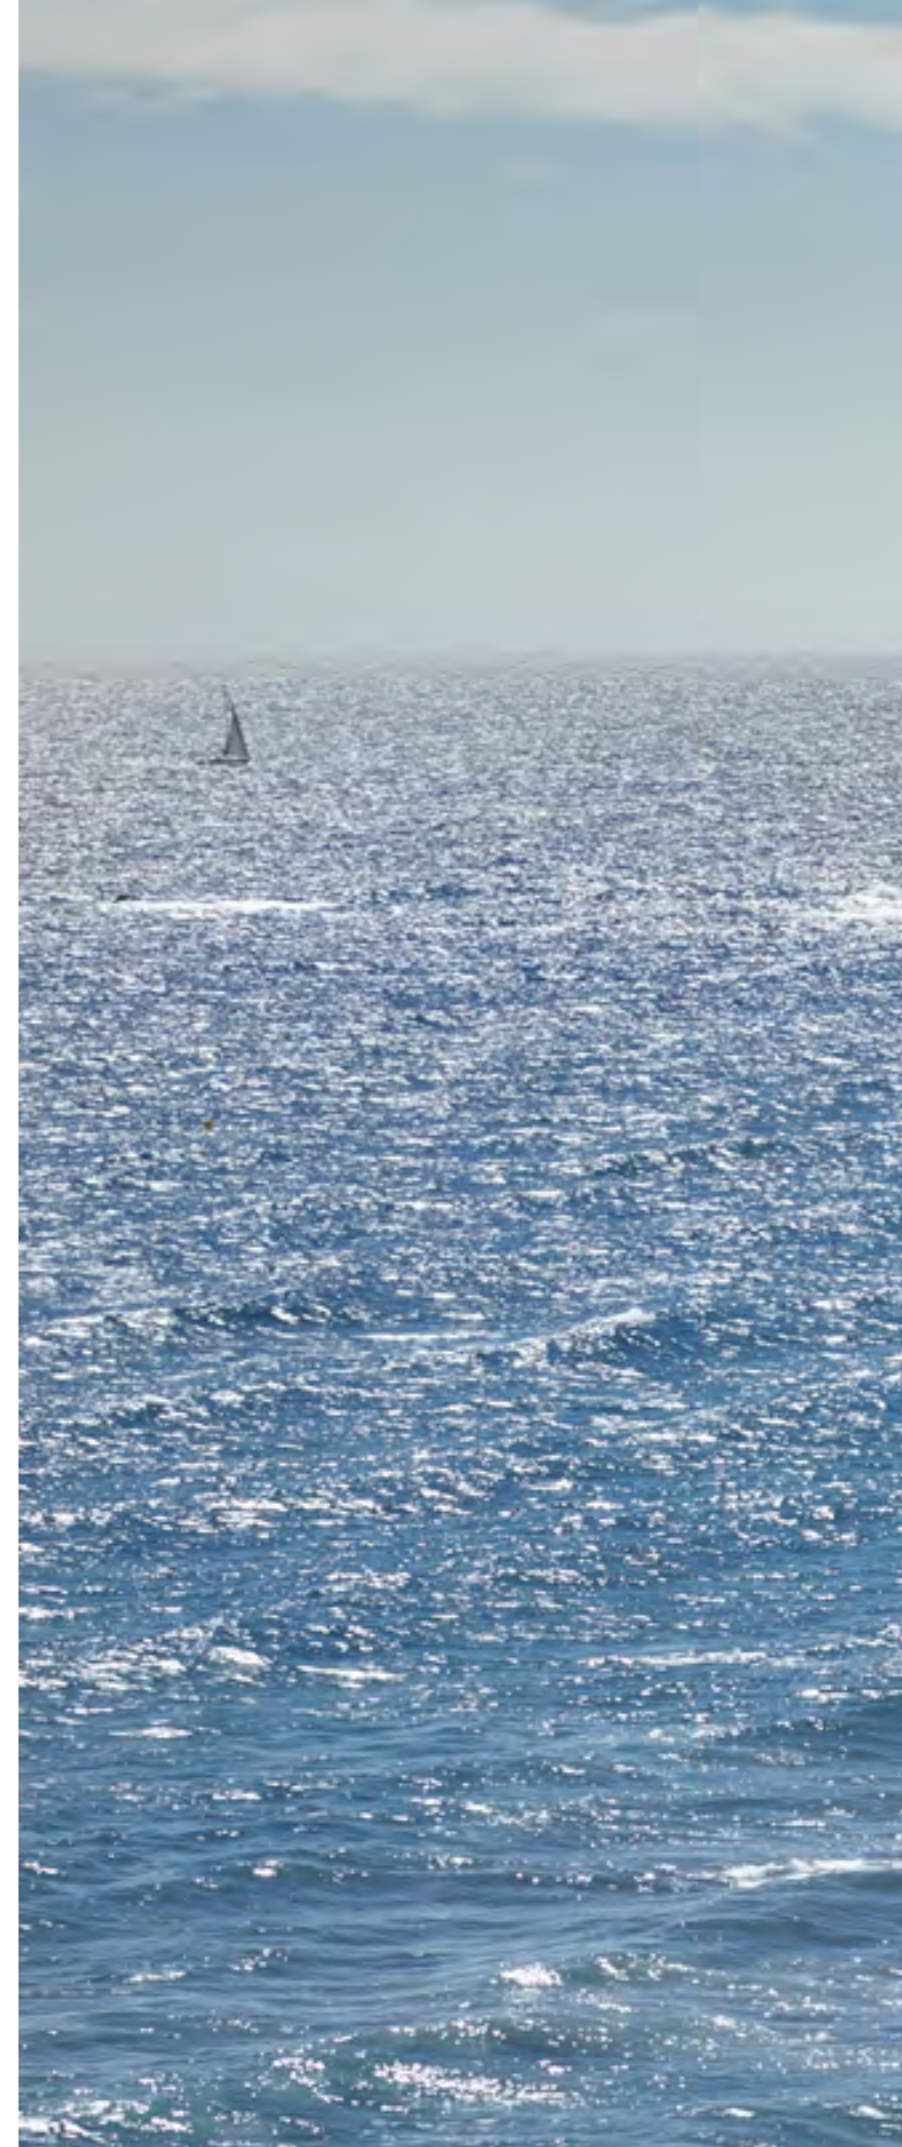

The wide choice of elements and their versatile performance give a personal identity to any location.

The various elements can be easily and quickly assembled, removed, separated and re-inserted into unlimited combinations.

The heat treated ash-wood beams are the functional and aesthetic connections for the various elements: they outline the surroundings, allow separations, enrich the furnishing elements with the warm wood outdoor resistant. Ideas that generate new ideas.

Le travi

Le doppie travi sono in frassino termo-cotto. Il frassino termo-cotto si ottiene da un trattamento intensivo di travi di legno di frassino ad una altissima temperatura (ca. 180°C). Questo surriscaldamento produce una modifica permanente delle caratteristiche chimiche e fisiche del legno. Le cellule del legno subiscono una variazione chimica che ne aumenta la resistenza al degrado biologico specialmente in ambienti esterni. Il legno che subisce un simile trattamento assume poi un aspetto 'vissuto', diventa più scuro con tonalità differenti, anche molto scure e la colorazione può ancora variare col passare del tempo. La sua permanenza all'esterno, con una continua esposizione agli agenti atmosferici, provoca una ossidazione superficiale che porta ad una progressiva decolorazione dell'essenza fino ad un colore grigio. Per mantenere la finitura originaria si consiglia una manutenzione periodica con oli protettivi per legni esterni. Si consiglia inoltre di evitare che le travi rimangano a lungo a contatto con acqua stagnante. A tal fine le doppie travi vengono fornite con un piede che le mantiene alzate dal pavimento. Il frassino termo-cotto si può definire un materiale ecologicamente pulito sia per la sua origine che per i trattamenti ai quali è sottoposto.

Materiali

Tutte le strutture sono in alluminio con trattamento a polveri per esterno. La finitura è il CIPRIA. Gli intrecci sono realizzati in Sunrope: un filo di PVC con all'interno un rinforzo in poliestere.

EN_ Key West

The beams

The double-beams are made with heat treated ashwood. Heat treated ashwood is obtained by intensive treatment of ashwood beams at an unusual high temperature (abt. 180° C). Such overheating will permanently modify the chemical and physical wood-features. By changing the chemistry of the wooden cells, the process will increase the resistance of wood to biological degradation, even in outdoor locations. The heat treated wood will look aged and get brown shades and tones which may change with time passing. The permanent exposure to the weathering creates an oxidation of the surface and this may fade more and more to grey. To keep the original finish a periodic care with protective oils for exterior woods is suggested. We also suggest not to leave the beams soaked in a moist/wet soil. For this reason we provide the double-beams with special feet. Heat treated ashwood is an ecologically clean material both on its production and its use.

Materials

All frames are in aluminum powder coated. The finish is CIPRIA (powder). The weave is made with a special rope named SUNROPE. Sunrope is a PVC rope with inside a polyester yarn.

DE_ Key West

Träger

Die Träger sind doppelt und bestehen aus Thermo-Esche-Holz. Thermo-Holz ist das Ergebnis einer außergewöhnlichen hohen Wärmebehandlung (180° Grad). Diese Behandlung verändert die Holz-Eigenschaften die sich so für den Außenbereich bestens anpassen; die chemische Modifizierung der Holzzellen beschränkt die Aufnahme des Wassers. Thermo-Esche-Holz scheint natürlich gealtert und die Holzfarbe wird dunkler mit braunen Flecken und Farbtönen die sich mit der Zeit leicht abändern. Die permanente Benützung im Außenbereich und die Witterungseffekte bewirken eine Oxydation der Oberfläche, die eine Farbabweichung bis zum Grau erreichen kann. Um die ursprüngliche Oberfläche zu behalten, ist eine dauernde Behandlung mit Schutzöle für Holz im Außenbereich empfohlen. Hinweis: die Träger nicht in stillstehendes Wasser lassen. Um die Wasserstauung der Träger zu vermeiden, haben wir besondere Füße montiert. Thermo-Esche-Holz ist ein umweltfreundliches Material, sei es von der Produktion, wie auch vom seinem Gebrauch her.

Material

Die Gestelle sind alle aus Aluminium pulverbeschichtet. Die Ausführung ist CIPRIA (Puder). Das Geflecht besteht aus einem besonderen Seil das sich SUNROPE nennt. Sunrope ist ein PVC-Seil mit einem Polyesterkern.

FR_ Key West

Les poutres

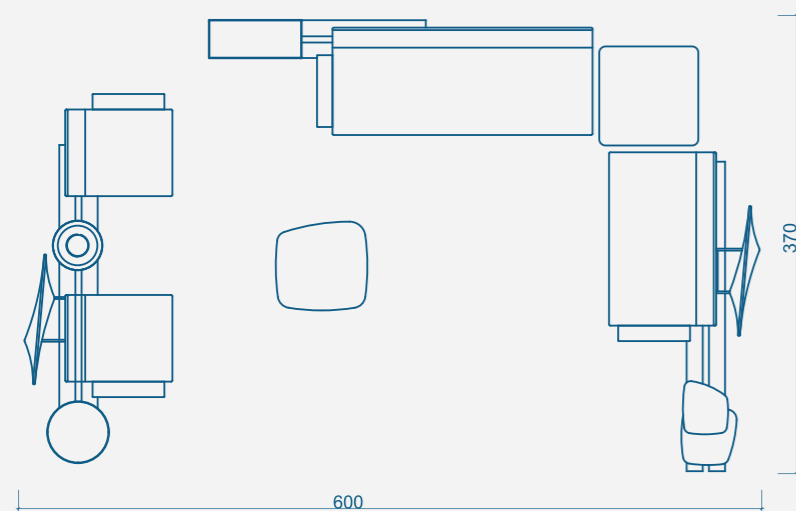

Les poutres sont en bois de frêne thermo-chauffé. Le traitement de thermochauffage consiste à chauffer le bois de frêne à haute température (180°C) afin de le rendre impuiescible et indéformable. Le bois est chauffé en plusieurs phases; la chaleur transforme les glucoses du bois en acides et la résine se cristallise en donnant au bois une forte résistance aux insectes et à la moisure. Le bois traité devient plus foncé avec différentes nuances de couleur et il peut continuer à modifier ces nuances au fil du temps. La permanence à l'extérieur et l'effet des agents atmosphériques donnent lieu à une oxydation de la surface qui conduit à un changement de couleur jusqu'au gris. Pour maintenir la finition originale nous conseillons un soin regulier avec huile de protection pour bois extérieur. La seule précaution conseillée c'est de ne pas laisser les poutres plongées dans l'eau; pour cette raison nous avons prévu un pied en acier qui les souleve du sol. Le bois de frêne thermo-chauffé peut être considéré, soit par son origine soit par son traitement, un matériel écologique.

Materiaux

Toutes les structures sont en aluminium avec traitement époxy. La finition est CIPRIA. Les tressages sont réalisés avec le SUNROPE. Le Sunrope est une bande en PVC avec un fil de polyester à l'intérieur.
